

ABSTRACT

In a branch tee fitting (1) fabricated by press forming, in order to enhance the brazing strength thereof and the brazing workability thereof by allowing separate brazing
5 of pipes (P) to a tubular body portion (11) and a tubular branch portion (12), engaging
pawls (14) are provided which engage flat portions (13) superposed to each other in angles
between the tubular body portion (11) and the tubular branch portion (12).
